The New OptoSmart Sensor for the Fitness Technology Kinematic Measurement System

The new KMS OptoSmart Sensor is approximately half the size of the old sensor.

It also has a lead with a double RJ11 socket that removes the need for the double adaptor used in the old sensor version.

The new sensor still requires no reflector greatly reducing setup times. It also has a range compatible with the old version (2 metres in front of sensor) and can be used in conjunction with the old sensor. More information is available on the KMS page of our website ([Here](#)).
